

**Bad Design:**

The interface uses light, low-contrast colors that strain readability. The layout feels unbalanced with disproportionate spacing and oversized control buttons. The typography lacks hierarchy, and icons appear inconsistent in style and placement, making the design feel cluttered and less intuitive.

Good Design:

The interface embraces a darker theme, which enhances contrast and visual comfort. Typography is well-organized with a clear hierarchy, giving importance to the song title and artist. Playback controls are spaced evenly and intuitively placed. Icons are minimal, consistent, and aligned, improving usability and visual appeal. The overall design feels clean, modern, and user-friendly.
